The alternative to
the RIC hearing
system

Make the most of modern infotainment with Smart Connect from Audio Service

quiX

THE ALTERNATIVE TO THE RIC HEARING SYSTEM

quiX hearing systems are worn directly in the auditory canal and are thus virtually invisible. The small housing with a replaceable standard ear mold offers enormous flexibility and allows the hearing system to be tried out immediately. Experience the immediate hearing experience!

Because of their position in the ear, the hearing systems utilize the natural function of the concha, which has a decisive influence on the acoustic quality familiar to everyone. It picks up sound coming from all directions, amplifies and combines it, and passes it on to the eardrum.

For a perfect fit in the ear, you may choose from between three different standard ear molds which are available in various sizes and designs.

DESIGN TYPES

TAILORED TO YOUR INDIVIDUAL DEMANDS

The small housing of the quiX hearing system contains all of the technology.

quiX hearing systems are available in four graded design types – from basic hearing systems to innovative state-of-the-art technology. Various product features are bundled in each design type.

All quiX models **are easy to wear**, as they either automatically adapt to your particular hearing situation or can be adjusted manually. A variety of remote controls and smartphone apps are available for this purpose.

Special **filters** developed by Audio Service protect the delicate microphones and loudspeakers, keeping the sensitive technology inside the hearing systems clean.

INNOVATIVE TECHNOLOGY

IN THE SMALLEST OF SPACES

The technical features of the quiX hearing systems offer a variety of options for adapting them to your individual lifestyle.

The hearing systems are adjusted to suit your individual hearing loss. In doing so, low sounds are generally amplified differently to high-pitched sounds. Loud and soft sounds are also often processed differently. Only in this way does the sound meet your individual needs and is pleasant and natural.

In addition, background noises are effectively suppressed. This ensures carefree listening comfort. The latest technology generation G4 additionally offers new programs which further optimize speech highlighting and also take into account the special requirements when listening to music and hearing in echoing rooms.

WIDE RANGE OF ACCESSORIES

ACCESSORIES FOR ADDED COMFORT

The quiX hearing systems of the latest G4 technology have **wireless functionality**. This enables you to link your hearing systems to various audio devices and mobile terminals using the multi-functional **Smart Connect** remote control. Audio signals with excellent speech and sound quality are transmitted directly to your hearing systems, fully wireless and in top stereo quality.

For convenient operation of the quiX hearing systems, there is a variety of remote controls to optionally choose from. With these remote controls, hearing programs and volume can be set with ease, also via the app with your smartphone.
