

Discover the Smart Direct app and all of its functions for convenient customization.

In collaboration with your iPhone, the Smart Direct app makes your hearing experience very convenient. Once installed, the app becomes a remote control for your hearing systems or turns them into stereo headphones. Telephone calls and streamed music are forwarded from your iPhone directly on to the hearing systems – without any additional accessories.

Hearing – without any compromises

The new G5 technology

 Audio Service

A new connection

A good companion offers comfort. The best companion sets new benchmarks.

The new G5 technology knows your world and wants to experience it together with you. Digitally connected and individually configurable, it accompanies you wherever hearing is truly important.

G5))

The G5 generation
Optimally connected for maximum hearing comfort.

The new G5 generation. Enjoy each day with all of your senses.

Mobile at all times – G5 hearing systems detect your movement and adapt to it.

MotionSense — On the go: in combination with the smartphone and the Smart Direct app, the G5 hearing system becomes your attentive companion. Using *Bluetooth*®, the hearing systems are connected to the movement sensors of the smartphone at all times and ensure all-round perception when biking, jogging or driving a car. If you interrupt the movement, the G5 technology automatically focuses on noises in your direct vicinity.

Familiarly clear – G5 hearing systems ensure natural perception of your voice.

Occlumatic — Even if every day brings something new: the pleasant sound of your own voice should always be the same for you. After undergoing a brief training process, together with your hearing system specialist, G5 hearing systems detect the fully individual tone of your voice and remember the signal processing. The overall result: more naturalness and more confidence in your own voice and everything you say.

Comprehensively focused – G5 hearing systems automatically adapt to your conversational situation.

SpatialSpot — Life often has more than just one focus: in complex hearing situations, in conversations with business partners or friends, no one wants to miss anything. This is why the G5 technology focuses on your main conversational partner, yet still specifically allows other signals. As a result, you can fully concentrate on your conversation – and yet not miss anything which incidentally becomes particularly important.

Directly connected – G5 hearing systems offer you many connection options plus wireless audio streaming.

Direct Audio Streaming — The best conversation begins in the ear: because telephone calls, music or announcements from navigation systems now become part of your individual hearing experience with the iPhone and the G5 *Bluetooth*® technology. The signals are streamed directly to the hearing system. The optional Smart Transmitter 2,4 also connects your G5 hearing system to your TV or HiFi device very easily and without any other additional devices.
